

Grounded Answer Desk - VPS Commands Cheatsheet

1. Check MCP Server Status

>> Is it running?

```
sudo systemctl status mcp-server
```

>> Start it

```
sudo systemctl start mcp-server
```

>> Stop it

```
sudo systemctl stop mcp-server
```

>> Restart it

```
sudo systemctl restart mcp-server
```

>> View live logs

```
sudo journalctl -u mcp-server -f
```

>> Last 20 log lines

```
sudo journalctl -u mcp-server --no-pager -n 20
```

>> Test /mcp endpoint

```
curl -s -o /dev/null -w "%{http_code}" -X POST http://localhost:8001/mcp \
-H "Content-Type: application/json" \
-d '{"jsonrpc":"2.0","method":"initialize","params":{"protocolVersion":"2024-11-05","capabilities":{},"clientInfo":{"name":"test","version":"1"},"id":1}'
```

2. Check OpenClaw Gateway Status

>> Is it running?

```
sudo systemctl status openclaw
```

>> Start it

```
sudo systemctl start openclaw
```

>> Stop it

```
sudo systemctl stop openclaw
```

>> Restart it

```
sudo systemctl restart openclaw
```

>> View live logs

```
sudo journalctl -u openclaw -f
```

>> Health check

```
curl -s http://localhost:18789/health
```

>> List available models

```
openclaw models list
```

3. Check Qdrant Vector DB Status

>> Docker container status

```
sudo docker ps | grep qdrant
```

>> Start if stopped

Grounded Answer Desk - VPS Commands Cheatsheet

```
sudo docker start qdrant
```

>> Restart container

```
sudo docker restart qdrant
```

>> Health check

```
curl http://localhost:6333/healthz
```

>> Collection status

```
curl -s http://localhost:6333/collections/strapi_docs
```

>> Count stored vectors

```
curl -s -X POST http://localhost:6333/collections/strapi_docs/points/count \
-H "Content-Type: application/json" \
-d '{"exact": true}'
```

>> Chunk breakdown by source

```
curl -s -X POST http://localhost:6333/collections/strapi_docs/points/scroll -H "Content-Type: application/json" -d '{"limit": 100, "with_payload": ["source_id"]}' | python3 -c "import sys,json; from collections import Counter; d=json.load(sys.stdin); c=Counter(p['payload']['source_id'] for p in d['result']['points']); [print(f' {k}: {v} chunks') for k,v in sorted(c.items())]; print(f' TOTAL: {sum(c.values())} chunks')"
```

4. Full Stack Health Check (Run All at Once)

>> Run smoke test script

```
bash scripts/smoke-test.sh
```

>> Check all systemd services

```
sudo systemctl status mcp-server openclaw
```

>> Check all ports in use

```
sudo ss -tlnp | grep -E '8001|18789|6333'
```

5. MCP Inspector (Run on LOCAL Machine, not VPS)

>> Launch Inspector (SSE transport)

```
npx @modelcontextprotocol/inspector sse http://3.107.236.36:8001/sse
```

>> Launch Inspector (no args, configure in UI)

```
npx @modelcontextprotocol/inspector
```

>> Then open in browser

```
http://localhost:6274
```

>> Inspector UI settings

Transport Type: SSE

URL: http://3.107.236.36:8001/sse

6. Re-Ingest Corpus (Only If Needed)

>> Delete existing collection

```
curl -X DELETE http://localhost:6333/collections/strapi_docs
```

Grounded Answer Desk - VPS Commands Cheatsheet

>> Activate venv

```
source ~/venv/bin/activate (or source .venv/bin/activate)
```

>> Run ingestion pipeline

```
python ingestion/run_ingestion.py
```

>> Verify vector count after

```
curl -s -X POST http://localhost:6333/collections/strapi_docs/points/count -H "Content-Type: application/json" -d '{"exact": true}'
```

7. Docker Utility Commands

>> List all containers

```
sudo docker ps -a
```

>> Add ubuntu to docker group (no sudo needed after)

```
sudo usermod -aG docker ubuntu && newgrp docker
```

>> View Qdrant container logs

```
sudo docker logs qdrant --tail 20
```

>> Qdrant storage path

```
~/data/qdrant (persisted volume)
```
